

EXAMINER INTERVIEW SUMMARY

The undersigned attorney and Examiner Bates held a telephonic interview on 8 February 2007. Claim 146 was discussed. It was agreed that claim 146 requires that the “processing resources” including the recited data processor, audio transducer, logic and computer program be mounted on the headset. It was pointed out that this invention provides a completely new class of device, not shown in the prior art.

The Examiner agreed to consider comments supporting this argument in an “after final” response.
